◆ KEY HIGHLIGHTS

- ◆ Based in Berlin · educated at TU Berlin and HTW Berlin · GCP Certified Cloud Engineer
- ◆ 7+ years corporate experience at Accenture, BMG Rights Management, Innocean Europe
- ◆ Won global AI hackathon integrating Azure OpenAI
- ◆ EU citizen | Remote, hybrid or on-site across the EU
- ◆ Founder, CEO & CTO of AI Waverider — 23 self-authored production systems
- ◆ AI-native engineering as daily practice — Claude Code & Agent SDK, MCP servers, autonomous coding loops, offline models
- ◆ Trilingual: German (C2), English (Fluent), Arabic (Native)

◆ PROFESSIONAL SUMMARY

Senior Software Engineer based in Berlin with 7+ years in enterprise development, specializing in microservices, cloud-native architecture and production Gen-AI systems.

Known for **end-to-end ownership**. Designed, built and operated 23 self-authored production systems alongside full-time enterprise delivery. Coordinated offshore teams across 3 time zones. Founder of AI Waverider, an AI automation platform and storefront.

Unique value: founder of an AI company (AI Waverider) who ships regulated, production software — GDPR erasure as a tested journey, 8-language localisation with a build-failing gate, and per-request AI cost accounting — combined with daily, deep fluency in the modern AI toolchain: Claude Code & Agent SDK, Codex, offline models (Ollama), custom skills, MCP servers and autonomous coding loops. Trilingual (German C2, English fluent, Arabic native).

◆ PROFESSIONAL EXPERIENCE

Founder, CEO & CTO

2025 - PRESENT

AI Waverider. AI Automation Platform

Production AI systems, built end-to-end | 23 self-authored systems | Curated workflow library

Founded and curated an AI-powered automation platform, gathering and integrating 5,600+ AI workflows from across the internet while building key components. Maintained full-time employment at Accenture, demonstrating exceptional time management and entrepreneurial drive.

- ◆ **Product Vision & Strategy:** Conceived, designed and launched an AI automation platform and storefront for businesses worldwide — products, a curated workflow library and content pipelines — continuously integrating the latest AI tools from the market
- ◆ **Full-Stack Development & Cloud Engineering:** Architected and built the entire platform solo. Frontend (React/Vue), backend (Node.js/Python), database (PostgreSQL/Supabase), and cloud infrastructure (GCP Certified, Docker, Coolify). Integrated Gen AI capabilities directly into web applications with seamless user experiences
- ◆ **Gen AI Integration & Engineering:** Architected and operated production Gen-AI systems — RAG pipelines with vector search (Qdrant), multi-provider LLM routing (OpenAI, Anthropic Claude, Gemini, local models via Ollama), agentic workflows with approval gates, MCP servers, and per-request cost accounting

- ◆ **Business Operations:** Handled all aspects: legal compliance (GDPR/DSGVO), payment processing (Paddle), marketing strategy, user acquisition, and customer support
- ◆ **Growth:** Achieved organic growth through content marketing, SEO optimization, and social media presence building
- ◆ **Tech Stack:** React, Vue.js, Node.js, Python, PostgreSQL, Supabase, n8n, Docker, GCP, Coolify, Nginx, Linux VPS

Senior Software Developer & Digital Transformation Consultant

AUGUST 2022 - PRESENT

Accenture GmbH, Germany

Fortune 500 Clients: Major German banks (real-time payment systems) & premium automotive OEMs (supply chain digitalization)

Leading digital transformation initiatives for Germany's most prestigious financial institutions and automotive manufacturers, delivering enterprise-grade solutions that process millions of transactions.

- ◆ **Cloud-Native Architecture:** Architected and implemented microservices using Spring Boot 3.x, Java 17/21 for high-volume real-time payment processing systems handling 100K+ daily transactions
- ◆ **Cloud Engineering & Platform:** GCP Certified Cloud Engineer. Deployed and managed cloud-native applications on OpenShift & Google Cloud Platform with 99.9% uptime SLA. Implemented comprehensive CI/CD pipelines, containerization strategies, and cloud infrastructure optimization with Jenkins and GitLab
- ◆ **Legacy Modernization:** Led monolith-to-microservices migration for banking client, reducing deployment time by 60% and enabling continuous delivery practices
- ◆ **Automotive Digitalization:** Optimized supply chain management systems for premium OEM, increasing operational efficiency by 35% through intelligent automation
- ◆ **Gen AI Innovation & Integration:** Won the global Accenture AI hackathon by integrating Azure OpenAI into enterprise workflows, and demonstrated production-ready RAG and agentic patterns for Fortune 500 clients
- ◆ **Global Coordination:** Managed offshore development teams across 3 time zones (Germany, India, UK), ensuring seamless collaboration and on-time delivery
- ◆ **Technical Leadership:** Mentored junior developers, conducted code reviews, and established best practices for microservices development

Application Developer

MAY 2022 - JULY 2022

Scopeland Technology GmbH, Germany

Developed enterprise applications using Low Code platforms for rapid delivery of business solutions.

- ◆ **SQL Optimization:** Analyzed and optimized complex database queries, achieving 40% performance improvement in data retrieval operations
- ◆ **Low Code Development:** Built dynamic business applications using proprietary Low Code platform, accelerating development cycles by 50%
- ◆ **Database Design:** Designed efficient database schemas and implemented stored procedures for complex business logic
- ◆ **Client Collaboration:** Worked directly with clients to gather requirements and translate business needs into technical solutions

IT Infrastructure Specialist

MARCH 2020 - MARCH 2022

Innocean Worldwide Europe GmbH, Germany

Managed complete IT infrastructure for European headquarters of global advertising agency, ensuring seamless operations for 89 employees across multiple departments.

- ◆ **Sole Responsibility:** Full ownership of IT operations for the European HQ — 89 employees, 99.8% system uptime, and a zero-disruption Windows 10 enterprise migration
- ◆ **Network & Identity:** Administered the network infrastructure end to end — VPN, firewall rules, Active Directory and Group Policies for secure remote access
- ◆ **Issue Analysis:** Root-caused recurring problems and documented the fixes — comprehensive IT documentation cut support tickets by 30%

Global IT Support Specialist

JULY 2018 - JANUARY 2020

BMG Rights Management GmbH, Germany

Provided enterprise IT support for global music rights management company, supporting users across 6 countries and multiple time zones.

- ◆ **Global Responsibility:** Sole point of contact for users across 6 countries and multiple time zones, supporting in English and German
- ◆ **Enterprise Systems:** SCCM software deployment, Active Directory for 500+ users, and OKTA SSO rolled out across 20+ applications
- ◆ **Issue Analysis:** Diagnosed and resolved incidents in ServiceNow with a 95% first-call resolution rate

◆ SELECTED PRODUCTS & PLATFORMS

Designed, built and operated end-to-end — 23 self-authored production systems, ~5,900 commits.

Omnalu (FlowState)

DESKTOP · RUST

Desktop AI where the audio and the screen index never leave the machine: GPU Whisper transcription with Metal/CUDA/Vulkan backends chosen at runtime, ScreenCaptureKit system-audio capture so both sides of a call are transcribed on headphones, a Swift Vision-OCR screen timeline linked into the Rust binary over a hand-written C ABI, and meeting output exported as DOCX or slides. Includes a patched upstream crate applied via [patch.crates-io] to kill a nil-pointer panic on display wake.

Rust · Tauri · Swift · whisper.cpp · Deepgram · ScreenCaptureKit · Vision OCR

Reply Autopilot

MULTI-TENANT SAAS

Multi-tenant email automation: 108 data models, 171 migrations and 20+ BullMQ workers. Tenant isolation is enforced by four independent mechanisms — a runtime query guard, an ESLint rule, a static audit script and a dedicated CI job. Ships a full deliverability control plane: SPF/DKIM/DMARC checking, DMARC aggregate-report ingestion with p=none→quarantine→reject escalation, Google Postmaster and Microsoft SNDS reputation, mailbox warmup and a reversible per-domain cutover.

Next.js · PostgreSQL/Prisma · BullMQ/Redis · Qdrant · Gmail API · Microsoft Graph · IMAP/SMTP

Lead Outbound AI

LIVE · REAL USERS

Live lead-generation platform. Five discovery providers — Apollo, Hunter, Google Places, OpenStreetMap and Instantly — normalised behind one lead type, with score-gated enrichment that refuses to spend credits on low-value leads. Per-provider USD cost accounting caught a real billing bug (Hunter charges per email returned, not per call). AI company research uses Gemini with live Google Search grounding. Multi-tenancy is enforced by 32 Postgres row-level-security policies rather than application code.

Next.js · Supabase/PostgreSQL RLS · Apollo · Hunter · Google Places · Gemini grounding

Content Factory

MULTI-BRAND PLATFORM

Multi-tenant content production platform. Remotion renders video programmatically, ElevenLabs voiceover drives beat-level timing so cuts land on sentence boundaries, HeyGen supplies per-beat avatars and Vertex AI generates stills. Three quality gates refuse to ship broken output — an fprobe check on audio and drift, and a vision model that rejects captures containing cookie banners or paywalls. Per-brand encrypted credentials, spend caps, and a byte-level render-parity test over rendered frames.

Remotion · Node.js · ElevenLabs · HeyGen · Vertex AI · MinIO/S3 · PostgreSQL

Ralph — Autonomous Coding Loop

AGENTIC AI

An autonomous coding control plane where the agent cannot certify its own work. Story selection is deterministic and owned by the shell, not the model; a story only passes with a machine-verifiable proof receipt; a quality ratchet makes the passing count mathematically unable to decrease; four typed circuit breakers stop runaway spend; and blocked runs escalate to a human decision inbox. It drove a 114-story backlog to 112 passing and produced a 346-commit production application.

Bash · Node.js · Claude Agent SDK · SSE · proof receipts · quality ratchet

Zelavi

REGULATED MARKETPLACE

Tele-therapy marketplace built to a regulated standard. Contract-first: 96 OpenAPI operations map one-to-one to routes and to a generated Dart client, and the typecheck itself fails if they drift. Per-conversation AES-256-GCM keys are derived with HKDF and the API has no decrypt function by design. GDPR right-to-erasure is implemented as a tested end-to-end user journey. On-device person-segmentation blur for video calls fails closed — no mask means the whole frame blurs.

NextJS · PostgreSQL/PostGIS · Flutter · LiveKit · Stripe Connect · 8 languages, 2 RTL

Wavecode

AGENTIC CODING CLIENT

A multi-provider agentic coding client: eight providers and 27 models behind one tool loop, with an embedded browser the agent drives by numbered element badges rather than guessed pixels. Local-model capabilities are read from Ollama at runtime instead of inferred from the model name, and the context slider computes per-token KV-cache RAM before a model is ever loaded. Four silent model substitutions were found and killed, each locked out by a mutation-checked test.

Rust · Tauri 2 · Ollama · MCP · ACP · OpenAI · Anthropic · DeepSeek · Kimi · GLM · Qwen

AI WaveCut

DESKTOP · SHIPPED

AI video-editing studio shipped as a signed macOS installer, with a tiered licensing and device-activation system: HMAC-signed keys, per-tier device limits, PBKDF2 key derivation from a device fingerprint and remote activation. A parallel C++17/Qt6 rewrite — 15 hand-written GLSL shaders including eight transitions, and FFmpeg linked through its C API rather than shelled out. Shipped as code and a written migration audit; the Qt build is not yet packaged.

Tauri · React · Python · C++17/Qt6 · FFmpeg C API · GLSL · faster-whisper

Social Automation Platform

MULTI-APP · SOCIAL.AIWAVERIDER.COM

A multi-app platform, not a single tool: an Instagram automation suite (keyword triggers, conversation flows, workflows, A/B tests, interactions and analytics — 11 modules), an AI translation pipeline with word-level timestamps, and separate music, video and thumbnail generation, over a Google Drive ingestion pipeline. Publishing goes to YouTube and Instagram — the YouTube resumable-upload protocol is implemented by hand (session initiation, chunked transfer, processing-status polling) rather than wrapped from an SDK. 40 registered modules, 18 queues, Stripe billing, with a React web client and an Expo mobile app.

NestJS · BullMQ · PostgreSQL · Instagram Graph API · YouTube Data API · Whisper · Stripe · React · Expo

aiwaverider.com

STOREFRONT

Storefront and content platform: dual payment rails (Stripe and PayPal), a RAG chatbot answering from the live catalogue over a Qdrant index, twelve transactional email templates, automated video ingestion from YouTube and TikTok on a cron schedule, first-party analytics, and a documented Firestore-to-PostgreSQL migration with eight numbered SQL migrations. Publishes a curated library of 5,600+ n8n automation workflows.

React · Node.js/Express · PostgreSQL · Redis · Qdrant · Stripe · PayPal · Firebase

ClinicAI

OFFLINE RAG

A fully offline clinical retrieval system — every network call in the codebase goes to localhost and no AI-vendor SDK exists in the tree. Documents are OCR'd with Tesseract, chunked paragraph-aware at 700 characters with a 120-character overlap tail, embedded locally and stored L2-normalised so a dot product is cosine similarity. Answers stream token by token from a local model with clickable citations back to the exact source text, and generate watermarked PDF and DOCX drafts.

Python · FastAPI · Ollama (gemma3 · nomic-embed-text) · Tesseract · NumPy · WeasyPrint

Laborsynopse

CLINICAL · GERMAN

German-language clinical laboratory analysis. Five LLM providers behind one proxy with per-call cost and token auditing, and a scan pipeline that never lets a model do arithmetic: units and reference ranges are resolved deterministically from two independent signals that must agree, or the row is flagged rather than guessed. Literature is re-screened for retractions against two independent sources and fails closed. Output is deliberately scoped as a Verdachtsdiagnose — a hypothesis for a clinician to check, never a diagnosis.

Next.js · PostgreSQL/Prisma · OpenAI · Anthropic · Kimi · DeepSeek · GLM · PubMed · Crossref

EDUCATION

B.Sc. Applied Computer Science (Angewandte Informatik)

2017 - 2022

HTW Berlin - University of Applied Sciences

- ◆ **Thesis:** "Design and Implementation of a Microservices Architecture for Healthcare Applications". Developed a scalable healthcare platform using Docker containerization, RESTful APIs, Django backend, and PostgreSQL database. Implemented HIPAA-compliant security measures and automated testing pipelines.
- ◆ **Grade:** 2.4 (Good) | **Focus Areas:** Software Engineering, Database Systems, Web Technologies, Cloud Computing

Industrial Engineering (Wirtschaftsingenieurwesen)

2012 - 2017

Technical University Berlin (TU Berlin)

- ◆ TU Berlin is a **TU9 member**. Germany's alliance of leading technical universities, ranked among the top engineering schools in Europe.
- ◆ **Focus:** Engineering fundamentals combined with Business Administration, Operations Research, and Production Management. This dual perspective enables me to understand both technical implementation and business value.

CERTIFICATIONS

Google Associate Cloud Engineer · November 2024

Validated expertise in GCP services including Compute Engine, Kubernetes Engine, Cloud Storage, IAM security policies, and monitoring with Cloud Operations Suite

Advanced Django Development · May 2021

Full Stack Web Development · February 2021

Accenture Jump Start Program · August 2022

Intensive 1.5-month enterprise software engineering training covering Custom Application Fundamentals, Web Architecture & Frontend, Framework & Patterns, Persistence (SQL & NoSQL), and Enterprise Architecture. Focus on client engagement, solution design, and delivery excellence

Test-Driven Development · May 2021

Advanced SQL Programming · March 2018
